PROFILE

I am a software engineering student, and full-stack web development is what genuinely drives me. Over the past three years, I have built several applications from scratch — not just to pass modules, but because I enjoy seeing an idea take shape into something that actually works. I care about writing structured, secure, and maintainable code, and I am comfortable working across both backend logic and frontend integration.

I am increasingly interested in AI — not to follow a trend, but because the Moroccan market is clearly moving in that direction and web development itself is being transformed by these tools. I want to understand those changes from the inside. For now, my core expertise remains full-stack web development, and that is where I want to contribute.

EDUCATION

École Marocaine des Sciences de l'Ingénieur (EMSI), Casablanca

Engineering Degree — Software Engineering (5-year) 2023 – 2028 (expected)

- Currently in 3rd year — OOP, Algorithms, System Design, Python, SQL, Networks.

Baccalaureate — Life and Earth Sciences June 2022

TECHNICAL SKILLS

Languages : Python, C, C++, PHP, HTML/CSS/JavaScript, SQL

Frameworks & Tools : Django, Vue.js, Laravel, Git, GitHub, REST API

Databases : PostgreSQL, MySQL, MongoDB, SQLite, Redis

Environments : Windows, Linux

PROJECTS

Personal Portfolio Website — [abdennour-s-portfolio.vercel.app](#) In progress

HTML · CSS · JavaScript · Typed.js

- Interactive site with scroll animations, animated typing effects, and an accessible mode (improved contrast, adjustable text size).

Hotel Management Web Application 2024 – 2025

Django · Vue.js · SQLite

- Built the full backend with Django: data models, REST API, and business logic (reservations, room availability, activity logging).
- Implemented a role-based authentication system (Admin, Receptionist, Client) — each profile accesses only what concerns them.
- Modeled the architecture upfront with UML diagrams, then connected the Vue.js frontend to the backend via API for smooth role-based navigation.

Full-Stack E-Commerce Platform 2024 – 2025

HTML · Tailwind CSS · Vanilla JavaScript · Django · PostgreSQL · MongoDB

- Designed a hybrid database architecture: PostgreSQL for transactions and orders, MongoDB for the product catalog — two well-separated, well-orchestrated databases.
- Optimized cross-database queries to reduce response times on high-traffic pages, and secured the application against CSRF attacks from the start.

Mini E-Learning Platform 2024

Laravel · Vue.js · MySQL · Redis

- Integrated Redis for session management, eliminating unnecessary page reloads and making navigation significantly more fluid.
- Designed the course and module structure in MySQL — relationships between users, courses, lessons, and progress tracking, built to be easily extensible.

Inventory Management System (CLI) 2023

C · Doubly Linked Lists · Data Structures

- Built from scratch in C a command-line application to manage products, suppliers, and purchase orders, implementing doubly linked lists without any external library.

CERTIFICATIONS

JavaScript, jQuery et JSON — EMSI January 2026

Introduction to Object-Oriented Programming (C++) — EPFL December 2025

LANGUAGES

Arabic (native) · **English** (C1 — fluent) · **French** (B1 — professional)
